Kennedy Kwality Lawn Grass Seeds

FOR PERMANENT LAWNS OF PUTTING GREEN TEXTURE — HOW TO MAKE A LAWN

The ground should be thoroughly prepared; that is, the soil should be fertilized, then turned over to a depth of 6 inches and pulverized. Sow good seed (which is very essential) roll the ground and cross roll in order to press the seed firmly into the soil. The proper time to sow grass seed depends upon the latitude. In the central and eastern states seed may be sown from March 1st to the end of June. Seed may be sown in the fall, from the first part of August to the end of October. Sow, if possible, when the ground is moist. For seeding a new lawn use 150 pounds to the acre.

KENNEDY'S BENTURF

Reg. U.S. Pat. Off.

LAWN GRASS SEED MIXTURE

(Bent Formula)

The popularity of golf in recent years has made comparison of lawns and putting greens an easy matter. One hardly expects his lawn to look as perfect as a putting green, but this is possible if sown with Kennedy's Benturf Lawn Grass Seed Mixture. With reasonable preparation and care excellent results have been accomplished with our Kennedy's Benturf Lawn Grass Seed Mixture which contains a large amount of Bent seed. This makes a compact, rapid growth, forming a close sward withstanding wear and tear. Lb. \$2.15, 25 lbs. \$50.00, 100 lbs. \$195.00.

KENNEDY'S GREENTURF

LAWN GRASS SEED MIXTURE

(Formerly Kennedy's Green Velvet)

This is the lawn grass seed mixture which for over 25 years has seeded many of the most beautiful lawns in America under the name of Kennedy's Green Velvet Lawn Grass Seed Mixture. Recently worthless mixtures bearing the trade name "Green Velvet" have been marketed to the confusion of our patrons. To avoid this confusion we have changed the name to KENNEDY'S GREENTURF LAWN GRASS SEED MIXTURE. The seed in this mixture is all re-cleaned and especially adapted to withstand the heat and drought of the summer. When properly sown and cared for GREENTURF will produce a beautiful green lawn the entire season. Lb. \$1.95, 25 Lbs. \$45.00, 100 lbs. \$175.00.

Kennedy Kwality Lawn Grass Seeds

KENNEDY'S KARPETURE LAWN GRASS SEED MIXTURE

This mixture is comprised of some of the quick germinating grasses as well as larger proportions of the permanent, deep rooted varieties. It has been tried in a great many sections of the country and has given excellent results where a quick cover was desired and has proven particularly adaptable for sowing on old lawns which have become shoddy and in need of renovating. Lb. \$1.75; 25 lbs. \$38.75; 100 lbs., \$150.00.

KENNEDY'S RENOVATING LAWN GRASS SEED MIXTURE

This mixture has been tried in a great many sections of the U. S. for the past few years. It contains grasses which grow especially well in light or sandy soil. Recommended for renovating lawns which have become bare in spots. Lb., \$1.25; 25 lbs., \$30.00; 100 lbs., \$110.00.

KENNEDY'S TENNIS COURT LAWN GRASS SEED MIXTURE

The hardest and finest low-growing grasses are contained in this mixture. It produces a beautiful and lasting green turf calculated to withstand hard wear and tear. 25 lbs., \$48.75; 100 lbs., \$190.00.

KENNEDY'S PUTTING GREEN LAWN GRASS SEED MIXTURE

This mixture is made up of deep rooting permanent grasses with a view of forming a close turf which will stand being played on a great deal without showing any wear and tear. 25 lbs., \$48.75; 100 lbs., \$190.00.

Grass Seed, Kennedy's Permanent Pasture

KENNEDY'S KWIKTURE LAWN GRASS SEED MIXTURE

Where a quick turf is desired which will remain green with a minimum of care and attention we recommend this mixture which is composed of deep rooting, strong growing grasses. Lb., \$1.40; 25 lbs., \$31.25; 100 lbs., \$120.00.

KENNEDY'S SHADETURE LAWN GRASS SEED MIXTURE

This is a mixture of extra fine grasses adapted for growing in the shade and under trees. We recommend the use of this mixture wherever other grasses, on account of shade, have failed to make a close sward. Lb., \$2.10; 25 lbs., \$47.50; 100 lbs., \$185.00.

KENNEDY'S TERRACE LAWN GRASS SEED MIXTURE

A mixture of strong, deep-rooted grasses for banks and terraces. Although the grasses are strong and deep-rooted, they will produce a fine, green velvety surface, and also prevent washing away during heavy rains. Lb., \$1.90; 25 lbs., \$42.50; 100 lbs., \$165.00.

LAWN CLOVER—Dwarf White

Very dwarf and of a spreading habit. We advise sowing White Clover separately on account of the seed being much heavier than that of the finer grass seed. It has a tendency to work to the bottom of the receptacle it is being sown from and consequently the last part of the grass seed sown has a greater percentage of Clover than the first. Lb., \$2.25.

WILD WHITE CLOVER

Dwarf growing, thick White Clover which is more vigorous than the ordinary White Clover, and excellent for lawns. One pound will cover about 800 square feet. Lb., \$2.85.

KENNEDY'S PASTURE MIXTURE

For Permanent Pasture and Hay Crops

Our Permanent Pasture Grass Seed Mixtures contain only grasses most suitable for this purpose. The result of sowing Kennedy's Permanent Pasture Mixture is a successive growth of rich, succulent grasses from early spring until late fall.

We recommend, in good soil, sowing 80 lbs. per acre or in poor soil 100 lbs. per acre. We also suggest sowing an additional 10 lbs. of Red Clover, in either case, to the acre.

Permanent Pasture Grass Seed may be sown either spring or fall but we advise sowing Clover in the spring only.

When ordering state whether your soil is sand, clay, moist or dry so that the proper proportions of the various grasses may be used.

A—For Light Soil. Sow 100 lbs. per acre. 100 lbs., \$85.00.

B—For Wet, Heavy Soil. Sow 100 lbs. per acre. 100 lbs., \$95.00.

C—For Woodland Pastures. Sow 100 lbs. per acre. 100 lbs., \$95.00.

SPECIALTIES

New strains and improvements over old favorites are continually introduced after thorough trials in the field. Our U. S. Department of Agriculture appropriates tremendous sums to breed in desired characteristics, or to develop something new. We are always on the alert to procure these items after careful trials. To continue to offer the old favorites results in a duplication and sometimes confusion for the gardener. As quantities are produced, and the price is in line, we therefore drop the older variety in any instance where the new introduction embodies all older features plus additional assets.

Kennedy Kwality Vegetable Seeds

ARTICHOKE

Fr., Artichaut; Ger., Artischoke; Sp., Alcachofa; It., Cariofo

Sow early in hotbed, or in open ground when weather is settled. Transplant when ready in rows 3 ft. apart, in rich, well-drained soil.

Large Green Globe. Pkt. 50c, oz. \$3.00.

Jerusalem. Plant from tubers, in rows 3 feet apart, cultivate frequently. Pk. \$5.00.

ASPARAGUS ROOTS

Fr., Asperge; Ger., Spargel; Sp., Esparrago; It., Asparagi

Asparagus roots should be planted in trenches, which should be prepared at least 2 feet deep and 1 foot wide, or 3 rows may be planted in a bed 5 feet wide. The excavated soil should be placed on each side of the trench; then put in a layer of barnyard manure 4 inches deep in the bottom of the trench; if manure is not available, use other matter rich in organic material. With a spading fork work this manure into the subsoil, then fill back the excavated soil to within 6 inches of the garden grade and your trench is now ready to receive the crowns which should be placed a foot apart and covered with about 2 inches of soil after the roots have been carefully spread out. Do not cut any Asparagus the first year as the plant has to build up a good root system and strong crowns before it can really produce. In the late fall, following planting, clear off all tops. The following spring the excess soil on the side of the trench can be filled in and the bed is complete. If the bed is given an annual dressing of a complete fertilizer, cultivated and kept free from weeds, it will give an abundance of Asparagus for many years.

Paradise. An excellent variety; heavy producer of very large stalks. Strong 3 year old roots. 100, \$10.00; 1,000, \$90.00.

Pedigreed Mary Washington. There is no strain of the Washington nearly as good as the "Mary." Earlier, more productive, larger stalks and possesses highest rust resistance. Strong 2-year-old roots. 100, \$7.00; 1,000, \$60.00. Strong 3-year-old roots. 100, \$9.50; 1,000, \$85.00.

NOTE: For other vegetable roots, see page 17.

ASPARAGUS KNIVES

The only proper and efficient method of harvesting Asparagus. Each \$1.00.

Kennedy's Long-Stemmed Imperial Giants

The Pansy has been a garden favorite since the middle of the 17th century. In recent years, hybridizers have developed the size of flower and length of stem to such an extent as to make descriptions inadequate. To convey a true picture of the infinite perfection of form, range of color, texture of petals, and length of stem, produced by our mixture of Long-Stemmed Imperial Giants is impossible. Several years ago we offered Kennedy's Long-Stemmed Imperial Giants in mixture only. With their free-flowering habit and wide range of sombrous shades of soft velvet, we do not hesitate to proclaim Kennedy's Long-Stemmed Imperial Giants, the finest Pansies in cultivation today.

We now offer this same strain in fixed name varieties, in addition to the mixture. Because the best flowers are shy seeders, the price of a good strain is necessarily high.

Single Annual Varieties

According to a recent ruling of the Federal Narcotics Department it is illegal to grow plants from which opiates may be extracted. These plants include the various strains of Poppies, Carnation Flowered, Peony Flowered, Cardinal and Tall Single Annual, therefore in adherence to this law we will not offer the above types of Poppy seed for sale.

Prize Winning Basket of Kennedy Kwality Gladiolus

In recent years there has been great improvement as to color and size of this wonderful flower, so in compiling our list, great care has been taken to select the best varieties in each color. Their long flowering season and stately habit together with their great variety of color and adaptability for all decorative purposes, command for them a prominent position in every garden. A succession of bloom may be had by planting the bulbs at intervals of two weeks, from April 15th to July 15th.

Due, no doubt, to scientific treatment of planting stock for years our Gladiolus have always been free from thrip. As an added precaution and to be sure that bulbs supplied by us are absolutely free from this pest, we will also scientifically treat our bulbs again before shipment is made to our customers.

Inasmuch as thrip lives in the soil, as well as on the bulbs in storage, through the winter, it is imperative that our bulbs be planted on soil where Gladioli were not grown last year and not close to other Gladioli from other sources.

We guarantee our bulbs to be the largest size and well matured, which is absolutely essential for producing exhibition flowers.

Kennedy Kwality Potgrown Strawberry Plants

There are many reasons for starting your Strawberry bed with pot-grown plants. They are established growing plants and their growth is not interrupted or retarded by transplanting, thus there is no loss of plants. They can be cultivated as soon as set out and kept growing. In planting pot-grown plants, a full crop is assured for next summer. Plant in rows two feet apart, twelve inches apart in the row.

August has long been considered the best month in which to start a Strawberry bed, although the planting may be done throughout the month of September with good success.

Strawberries can be grown in almost any soil or climate, from Florida to Canada, that will grow other crops; they are not fussy about types of soil, but like all other crops they will do better in well drained soil which will retain moisture and of good fertility. In planting be sure to firm the soil well around the plants and do not cultivate or hoe too deeply as too deep cultivation cuts the roots and loosens the soil improperly for root growth. Moisture is an essential requirement after the fruit is formed and during fruiting time.

In preparing the bed, when barnyard manure is not easily obtained, a complete fertilizer should be worked well into the soil at the rate of fifteen pounds per one thousand square feet of bed. Do not allow the plants to come in contact with the fertilizer, as it is likely to kill or scorch them. Another application of fertilizer, at the same rate as used in preparing the bed, should be applied again along the rows of plants very early in the spring before growth starts. All fertilizer should be carefully brushed off the leaves immediately after applying and never use fertilizer when the plants are wet. Unless soil is very acid, lime should not be used.

After heavy frost, usually in December in the vicinity of New York, apply a light mulch of salt hay or other similar material to prevent alternate freezing and thawing. When growth starts in spring, the salt hay should be arranged between the rows. This keeps the fruit clean, prevents the growth of weeds, and retains moisture which is very necessary during the fruiting season.
